2. The following is an examiner's statement of reasons for allowance: The closest prior art does not teach or suggest the recited disc shaped optical recording medium further including a surface layer formed of an amine salt compound held on the surface of the light transmitting layer, wherein the amine salt compound is a compound of perfluoropolyether having terminal carboxylic groups, represented by the chemical formulas (1) and/or (2):

where R_f denotes a perfluoropolyether group and R_1, R_2 and R_3 denote hydrogen or a hydrocarbon group, and wherein the perfluoropolyether group R_f is represented by the formulas (3), (4), and/or (5):

where i, j, m, n, p, and q denote integers not less than 1;

wherein a surface resistance of that side of the optical recording medium having the amine salt is not larger than $10^{13}\Omega$; and

wherein the dynamic frictional coefficient of that side of the optical recording medium having the amine salt is not higher than 0.3; and

a skew correcting member on a second of said two major surfaces of said support, said second of said two major surfaces being disposed on a side opposite to a side of said support on which said light transmitting layer is disposed.

The prior art does not teach motivation or suggestion for modification to make the invention as instantly claimed.
